What should you expect from a well-done home exterior? Here are some of the benefits:

1

Curb Appeal.

More than 90 percent of builders agree that Hardie® fiber cement products increase a home's appraisal value.*

2

Low Maintenance.

Factory-finished fiber cement siding requires less maintenance than wood and could save you a lot on repairs later.

3

Energy Savings.

New siding materials, weather barriers and climate insulation may offer energy savings and help lower your utility bills.

4

Environmental Impact.

The U.S. Green Building Council recognizes fiber cement siding for its durability and sustainability.

*Based on an independent survey of 240 single-family residential builders nationally – including James Hardie users and nonusers.

Inspired by dreams. Engineered for nightmares.

Stand up to the harshest elements and the test of time.

Hardie® fiber cement products are Engineered for Climate®, so no matter where you live, you can feel confident your home will withstand whatever Mother Nature might bring.

Wood-Based Siding

Joints must be properly maintained to prevent water penetration. The required 3/16 in. gaps at butt joints need caulk or clips, which increasingly accentuate the gaps since they can fade at a different rate than the siding.

Vinyl Siding

At 0.05 inches thick, vinyl siding lacks the authentic wood appearance of Hardie® siding. Vinyl siding is installed in “panels,” which create larger, more visible seams.

Aesthetics

You don't have to be a professional to know when an exterior home design feels right. When selecting siding for your home, don't settle. Choose a siding product that is going to make your dream home a reality.

Hardie® Siding

Hardie® products provide deep shadow lines and a warm wood-grain texture with seams that are less visible. No caulk or unsightly clips required. And our siding is up to five times thicker than vinyl siding.

Wood-Based Siding

After extended exposure to sunlight, third-party, pre-finished wood-based siding can show more wear and tear.

Vinyl Siding

Vinyl siding may crack, buckle or sag with extreme-weather stress and time. Vinyl can fade or discolor faster than ColorPlus® Technology finishes by James Hardie.

Learn more about our exclusive ColorPlus® Technology at [jameshardie.com/colorplus](https://www.jameshardie.com/colorplus)

Time

Paint and other siding finishes applied in the field can dull substantially through the years. Give your home an exterior that will keep its good looks over time.

Hardie® Siding

James Hardie's baked-on ColorPlus® Technology finishes provide better long-term color performance with superior resistance to fading, chipping and cracking.

Wood-Based Siding

Each board is natural fuel for fire, putting your home at greater risk for fire damage.

Vinyl Siding

Vulnerable to melting caused by flame, grills and solar heat reflected off Low-E windows.

Fire

A home's exterior is its first line of defense against extreme weather and fire. Prepare your home for the unpredictable with siding that won't burn.

Cal-Fire Compliant

Fiber Cement Siding

James Hardie

Hardie® Siding

Fire resistant and will not ignite when exposed to a direct flame, nor will it contribute fuel to a fire. Recognized by fire departments nationwide.[†]

[†]Hardie® siding complies with ASTM E136 as a noncombustible cladding and is recognized by fire departments across the U.S., including Marietta, GA, Flagstaff, AZ, and Orange County, CA. Fiber cement fire resistance does not extend to applied paints or coatings, which may be damaged or charred when exposed to flames.

Wood-Based Siding

Subject to damage caused by woodpeckers, termites or other pests.

Pests

Mother Nature's creatures can wreak havoc on Wood-Based siding. It can be pecked by birds or damaged by termites or other pests. Save yourself the maintenance hassle —don't let your home fall prey to these critters.

Hardie® Siding

Made from a substrate that holds no appeal for woodpeckers, termites and other pests.

Wood-Based Siding

Swelling and edge checking normally occur in wood-based products as they expand and contract in response to changes in weather.

Vinyl Siding

More susceptible to damage from hail and may crack, buckle or sag as a result of extreme temperature changes.

Mother Nature

Your siding is exposed to Mother Nature all day, every day. You deserve to feel confident that it can hold its own throughout it all — from the changing seasons to even the most extreme weather.

*

Hardie® Siding

Uniquely Engineered for Climate® to stand up to the harshest elements —resists damage from wind, rain, freezing temperatures and hail.

Fiber Cement Siding

Engineered for superior durability, fiber cement siding can deliver better overall performance than wood or vinyl siding, so homes maintain their appeal and value over time.

Wood-Based Siding

Wood-Based siding is made from wood, wood strands or fibers bonded together. It is more affected by weather and moisture, and can be more easily damaged by fire or pests.

Vinyl Siding

Vinyl siding comes with its own set of vulnerabilities, such as hail and the sun's UV rays, as well as fire and heat, which can cause it to crack, buckle, warp—even melt.

Make your dream home uniquely yours.

When picking the siding style for your home, there are a few things to keep in mind:

Love where you live.

Reflect your lifestyle with siding materials and designs that bring your unique vision to life.

Look beyond the surface of the siding.

Hardie® fiber cement products deliver superior overall resistance to weather, fire and damage from pests.

Take the long view.

Re-siding your home returns more value than any other major home exterior project,* and fiber cement siding can help you spend less time and money maintaining your home.
